Immunization Health History Form
All Students Must Complete and Sign

Name: Last First Middle
Date of Birth: Month/Day/Year Phone: ( ) D#:

(TO BE COMPLETED BY COMPLETED BY NEW APPLICANTS ONLY)

The General Assembly of the State of Tennessee mandates that each public or private postsecondary institution in the state provide information concerning measles, mumps, rubella, varicella, and hepatitis B infections to all students matriculating for the first time.

The law does not require that students receive vaccination for enrollment. Furthermore, the institution is not required by law to provide vaccination and/or reimbursement for the vaccine.

Hepatitis B (HBV) Immunization

Hepatitis B (HBV) is a serious viral infection of the liver that can lead to chronic liver disease, cirrhosis, liver cancer, liver failure, and even death. The disease is transmitted by blood and or body fluids and many people will have no symptoms when they develop the disease.

- I hereby certify that I have read this information and I have had the entire series of the Hepatitis B vaccine.
I hereby certify that I have read this information and I have elected not to receive the Hepatitis B vaccine.
I hereby certify that I have read this information and I have elected to receive the Hepatitis B vaccine and/or I am in the process of receiving the complete three dose series of the Hepatitis B vaccine.

Measles, Mumps, Rubella (MMR) and Varicella Immunizations

Measles causes fever, rash, cough, runny nose, and red, watery eyes. Complications can include ear infection, diarrhea, pneumonia, brain damage, and death.

Mumps causes fever, headache, muscle aches, tiredness, loss of appetite, and swollen salivary glands. Complications can include swelling of the testicles or ovaries, deafness, inflammation of the brain and/or tissue covering the brain and spinal cord (encephalitis/meningitis), and, rarely, death.

Rubella causes fever, sore throat, rash, headache, and red, itchy eyes. If a woman gets rubella while she is pregnant, she could have a miscarriage or her baby could be born with serious birth defects.

Varicella (chickenpox) causes blister-like rash, itching, fever, and tiredness. Complications can include severe skin infection, scars, pneumonia, brain damage, or death.

You can protect yourself against these diseases with safe and effective vaccinations.

- I hereby certify that I have read this information and I have had the entire series of the MMR and Varicella vaccines.
I hereby certify that I have read this information and I have elected not to receive the MMR and Varicella vaccines.
I hereby certify that I have read this information and I have elected to receive the MMR and Varicella vaccines and/or I am in the process of receiving the complete series of MMR and Varicella vaccines.

Signature of Student: Date:
(Parent/Guardian must sign if student is under the age of 18)

For more information about these diseases and the vaccine schedules, please contact your local health care provider or consult the Center for Disease Control and Prevention Website at: www.cdc.gov/health/default.htm.
